

Helping to Solve Today's Marine Applications

Whitney Blake understands the difficulty of harsh environment applications & the inconsistency when dealing with multiple sources.

Here is one example of a client's success:

Challenge: A leading global OEM of marine products experienced a challenge with a newly introduced electric boat motor. The root cause of the issue was traced back to the cable interconnect design.

Solution: Whitney Blake worked with the client to develop a custom over-molded cable strain relief of appropriate material and size to enhance the life of the cable interconnect. It eliminated stress on the conductors caused by frequent movement of the motor.

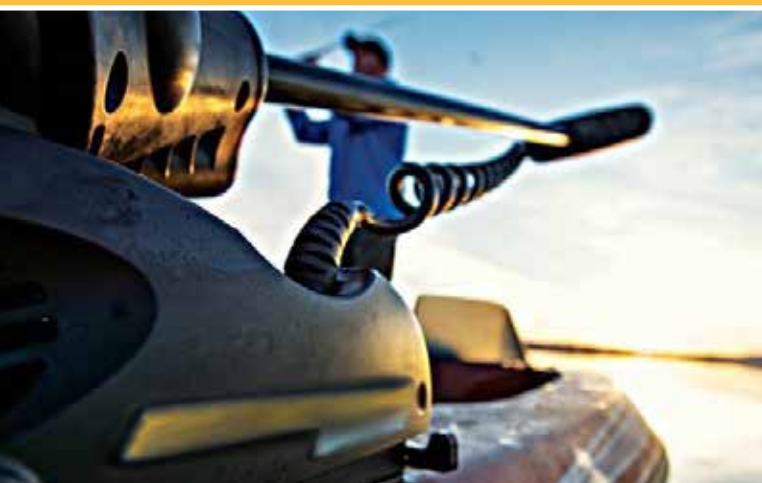

We can make your applications a success by being your **SOLE SOURCE**. We'll take your ideas from conception to production, from raw material to quick-turn delivery:

At Whitney Blake You'll Find One Source For:

- Standard and custom cables, cords, connectors, wires, harnesses, and assemblies
- Engineering, design, prototyping, manufacturing, warehousing, and delivery
- Answers to your questions—They are all part of our full-scope project management

Here's How We Help You Make Successes:

- Analyze problems you may be having with custom or standard cable, wire, and harness components and assemblies
- Find a solution—off the shelf or custom—that gives you the performance characteristics you need
- Source and warehouse raw materials from around the globe, based on 26 years of NAFTA and customs expertise
- Set up tooling and provide precision low or high volume manufacturing
- Test the cable, wire, and harness components and/or assembly to make sure they meet all your requirements
- Deliver on time and on budget

*Your Innovative,
Interconnect Solutions Company*
